

IWAS

I walrus here. → i was here. → IWAS
(Sui Overflow 2026 · Walrus Track)

iwas.app

The Hook (Problem)

Every platform that promised to remember you
eventually forgot.

(Whisper. Yik Yak. MySpace. Google+. - gone, taking millions of
human confessions with them.)

The Idea

- Humans have always scratched 'I was here' into walls
- cave walls, bathroom stalls, ruins.
- **IWAS brings that impulse to the decentralized web.**

(every mark is permanent, emotionally understood, and owned by no one.)

How it works

1. Upload

Blob to Walrus

2. Read

Claude AI: emotion

3. Remember

Stored in
MemWal & Walrus

4. Sui

Indexed on Sui

The Wall

my marks

0x9055...0802

Walrus was here!!

Every mark, from every wallet - visible forever.
(Real marks, stamped live during development.)

*my grandmother passed
in february and i still
pick up my phone to call
her somet...*

*I spent 3 years loving
someone who...*

Why Walrus

Storage layer

Every mark is a blob. No database, no server holding it hostage.

Memory layer

MemWal makes the AI's understanding of every mark permanent – survives a browser clear, a device switch, anything.

AI agent

IWAS AI reads every mark, feels the emotion, and commits it to memory. Not a chatbot bolted on - a silent witness baked into the architecture.

(This is what the Walrus track is asking for. IWAS delivers all three in a single user action.)

Permanence is funded, not assumed.

Marks last as long as the community chooses to keep them alive. Every blob is purchased for a number of epochs, and when they run out, the mark fades. But anyone, not just the original author, can extend a stranger's mark for a fraction of a cent in SUI.

(We didn't just use Walrus. We understood what it actually does.)

What's next

Paid permanence

Extend a mark's storage epochs in SUI. Pay once, last for years.

Community renewal

Anyone can preserve a stranger's memory. The wall survives as long as people care.

Branded walls

Private spaces for events, communities, and memorials, all built on the same architecture.

Every human who ever lived wanted to be remembered. Now it's your turn.
